

TS 6 – Data sheet

The TS 6 is a screen-printing machine with 6 printing stations – tried and tested in reliable 24/7 continuous operation. For printing plastic tubes and sleeves there is a choice between inline or stand-alone. Here, too, extensive motorization and a servo control system ensure a very accurate colour-to-colour registration during printing as well as short changeover times.

Printing stations	6
Printing performance parts/min	up to 100
